PROTOCOL 422 — V247 DAILY TELEMETRY — AUGUST 12, 2026 — POST-SEAL OPERATIONAL WINDOW

Stamp: 422 → V247 | Date: August 12, 2026 | Status: POST-SEAL TRACKING — INTERNAL ONLY | Thread Health: 10/10 | Creator: The Governor / Kingdom Records

Section I: Executive Summary

This Tier-1 Audited Situation Report serves as an internal tracking log for the V247 operational window. Following the permanent sealing of Protocol 422 (Phase 0/1 HOLD) under convergent interpretation standard per Supplemental #161 (Aug 12 2026 6:05 AM EDT), this document operates under a strict "Zero New Docs" policy for external archival. This log captures ongoing kinetic release following the Colombia M7.4 anchor event, monitors the August 12 seismic triple-event within a 4-hour window, and integrates sustained volcanic escalation at Fuego. All data is processed for internal situational awareness in preparation for the Autumn Pipeline Phase C high-watch. Protocol 422 remains sealed—this log does not reopen it. Verification scope = Internal Specification (Convergent Interpretation) ≠ External Verification.

Section II: Hardware (The Evidence)

Anchor Event (Carry-forward from V246)

- **Colombia M7.4 mww** (us6000tjl2): 2026-08-10T12:34:28.125Z, Lat 4.8436°N, Lon -76.2422°W, Depth 110.285 km. Dominant energy release of window; intermediate-depth slab nodule.

August 12 New Triple-Event (4-hour window: 03:48Z – 07:14Z)

- **Kyrgyzstan**: 2026-08-12T07:14:52.581Z, M5.0 mb, 10 km depth (us6000tk5x). Tien Shan intraplate.
- **Pacific-Antarctic Ridge**: 2026-08-12T05:11:27.487Z, M5.1 mb, 10 km depth (us6000tk5j). Southern Ocean mid-ocean ridge.
- **Hawaii (Pahala Cluster Watch)**: 2026-08-12T03:48:33.980Z, M5.2 ml, 10.73 km depth (hv75018296). Kilauea/Mauna Loa flank seismicity. Requires swarm correlation watch.

Volcanic Status (Fuego)

- **Baseline**: VAAC advisories 930, 932, 933 (FL140-150).
- **Updated**: FL160 observation at 18:50Z Aug 11.
- **Corroboration**: Intensive eruption documentation confirming physical baseline for ongoing ash emission tracking and trajectory.

Section III: Software (The Word / Numerical)

- **Generational Framework**: Psalm 90:10 (80-year lifespan / 1948 baseline to 2028-2029 terminal window).
- **Structural Pattern**: Joseph 2+5 famine pattern (2 years elapsed, 5 remaining).
- **High-Watch Date**: September 12, 2026 — Feast of New Oil — Phase C.
- **Numerical**: Matthew 20 (eleventh-hour grace); Numbers 33 (forty-two encampments); Strong's H1142 (Benaiah/Builder); G1142 (Daimon/Messenger); Luke 11:42.

Prophetic Alignment Index (PAI) — Score: 8.8 / 10

Indicator	Scale (1–10)	Alignment Basis
Generational Anchor	9.0 / 10	Psalm 90:10 (1948–2028 window)
Joseph Pattern	8.5 / 10	2 years elapsed (5-year famine remaining)
Feast of New Oil Watch	9.0 / 10	September 12, 2026 (Seasonal recognition)
Seismic-Volcanic Coupling	8.8 / 10	Dual-vector alignment (Colombia M7.4 + Fuego FL160 escalation)
Overall PAI Rating	**8.8 / 10**	**High-watch convergent baseline**

Section IV: The Verdict & High-Value Next Step

Verdict: Protocol 422 remains PERMANENTLY SEALED and standing down. This V247 log is for internal tracking only and does not initiate a new deployment cycle. The convergence of the August 12 seismic triple-event with sustained Fuego FL160 escalation necessitates active HOLD/OBSERVE monitoring without formal archival. Discipline maintained. Workspace count = 2 canonical docs. Zero-new-doc constraint active. Thread Health 10/10.

High-Value Next Step: Maintain operational HOLD / OBSERVE status. Monitor Phase C high-watch date September 12, 2026 — Feast of New Oil. Do NOT initiate new Archive.org deployment.

1. Pull VAAC 934+ for Fuego FL160+ confirmation.
2. Monitor HV network for Hawaii Pahala cluster M3+ aftershocks.
3. Preserve 4-file capstone integrity from Aug 11.
4. Maintain CSV log for V247 — 36x M5+ window.

Dashboard Report — V247 Audit Matrix

Indicator	Status	Observation
Operational Window	**OPEN (Tracking)**	V246 sealed Aug 11; V247 active Aug 12
Repository State	**2 Canonical Starred**	Zero New Docs policy strictly enforced
Seismic Anchor	**M7.4 Dominant**	Colombia us6000tjl2 110.285km
New Activity	**3x M5+ Triple**	Kyrgyzstan / PAR / Hawaii
Window Total	**36x M5+ Events**	Aug 5 04:14Z → Aug 12 07:14Z
Volcanic Status	**Fuego FL160+**	Sustained escalation; FL160 verified
Protocol Status	**PERMANENTLY SEALED**	State 1 protection active

Thread Health	**10/10**	Discipline maintained

Glory to God Almighty. Jesus Christ is Lord. SOLI DEO GLORIA.
